experience in the configuration
and management of simple
and complex PKIs

Unique PKI-platform

Sophisticated service level
agreements (SLAs)

Globally recognised roots

More than 3,500 registered
business clients

Our mission

We secure the electronic interchange of information.

Electronic communication is fast, efficient, cost-saving and integrates seamlessly into work processes. Consequently, it would be impossible to imagine today's working world without electronic communication. At the same time, protecting the information interchanged is imperative. As a trust centre, we supply electronic identities and render electronic communication confidential, authenticated and integer.

On the basis of electronic identities (certificates), digital signatures and encryption provide security when interchanging data electronically. Public key infrastructures (PKIs) allow electronic identities to be managed. TC TrustCenter is one of the leading specialists for electronic identities and PKI solutions.

Our philosophy

The foundation of all the products and solutions we offer is constituted by our Managed Service, operated on our PKI-platform in our high-security data centre. We issue certificates for you, which we manage and secure processes – regardless of whether we are dealing with a highly complex PKI or an individual certificate.

Our solution – On Demand PKI

The On Demand PKI solutions from TC TrustCenter offer your company optimised security. Our customers can focus on their core business and benefit from our security expertise, predictable costs, extremely high security level, sophisticated SLAs and the ongoing adaptation in line with the latest developments and standards.

Advantages of On Demand PKI

- ▶ Cost-effective: exclusively subscriber-based costs, no fixed costs, no set-up charges, no additional software
- ▶ Modular price model, which permits scalability also for large numbers of subscribers
- ▶ Fast implementation
- ▶ Pre-defined simple workflows for the tasks of applying, issuing, locking and revoking certificates
- ▶ Supports standard certificate profiles
- ▶ Web-based administration
- ▶ Convenient administration by means of a user-friendly interface
