

AxiCom PR, TC TrustCenter No. 06/09, December 2009

TC TrustCenter certificates combined with central enQsig Gateway solution to give maximum protection and legally admissible e-mail traffic

Comprehensive protection, easy entry, many options: communicate securely with TC TrustCenter and Net at Work

Hamburg, 03. December 2009 – With its new enQsig Gateway software, TC Certificate Partner and anti-spam specialist [Net at Work Netzwerksysteme](#) can now provide e-mail encryption and electronic signatures directly from a single source. Combined with the broad range of certificates from [TC TrustCenter](#), enQsig Gateway from Net at Work offers companies comprehensive data protection for e-mails. Moreover, reliable protection against viruses, spam and phishing attacks can easily be added to the solution. Flexible capacity stages in the solution offer tailored e-mail protection that can be individually adapted to companies' transaction needs and reliably meets even complex security requirements.

As part of the partnership between TC TrustCenter and Net at Work, companies can now use Net at Work's enQsig software as a central gateway in conjunction with TC TrustCenter's globally recognised certificates and procure both from a single source. Any company that needs confidential, legally admissible e-mail traffic that is compliant with data protection requirements can therefore solve two key tasks conveniently and centrally: enQsig's automatic encryption ensures that only the specified valid addressees can read the message. The digital signature, using a TC Gateway certificate for example, guarantees 100% authenticity of the message and the sender. At the same time, Net at Work's NoSpamProxy offers reliable and comprehensive protection against spam and phishing e-mails which are reliably identified and blocked centrally.

The integrated complete solution is also available in a wide variety of flexible capacity stages to meet particular customer-specific requirements. Moreover, companies can strengthen the confidentiality and evidence of authenticity with additional individual user certificates and at the same time store them conveniently with the TC ID Store. TC ID Store is a solution managed by TC TrustCenter for cost-effective management of all the certificates required in a corporate environment.

"We are looking forward to the partnership with Net at Work. The wealth of functionality offered by their enQSig software combined with the many options and security levels of our range of certificates gives customers a highly flexible solution that can be expanded according to the company's situation," explains Dr. Gunter Weinerth, product manager at TC TrustCenter. "This will make it easy to ensure that e-mail communication is confidential, binding and above all compliant with data protection requirements. Companies can be confident that complex e-mail security requirements will be met directly in a single solution from a single source."

Uwe Ulbrich, director of Net at Work, explains the benefits of the new solution: "The co-operation with TC TrustCenter enables us to offer our partners and customers the necessary certificates and signature cards in addition to our software. The broad range of certificates in the easy-to-operate TC ID Store and the flexible TC certificate partner concept were unbeatable. For us, the streamlined and simple ordering process from a single source is crucial to make it easier to sell the complex issues of encryption and signatures."

About Net at Work

Net at Work Netzwerksysteme GmbH is a Paderborn-based software and system house founded in 1995 by Uwe Ulbrich and Frank Carius, who are the company's shareholders and directors. In 2005, Net at Work launched the anti-spam solution NoSpamProxy which was devised by the renowned Exchange specialist Frank Carius specifically for corporate use (www.nospamproxy.de). Unlike conventional anti-spam solutions which only sort spam e-mails, NoSpamProxy rejects spam before it even reaches the server. At the same time, a bonus points system for known e-mail addresses (level of trust) and automatic notifications to the senders of blocked messages ensure that wanted e-mails always arrive. NoSpamProxy is sold via qualified specialist partners and is available in all German-speaking countries. As a system house and a Microsoft Certified Gold Partner, Net at Work also offers medium-sized companies in all industries solutions to optimise their business processes. Last but not least, Net at Work has certified export knowledge of Microsoft solutions. Around 700 business customers rely on NoSpamProxy, including Caritasverband Düsseldorf e.V., Deutscher Entwicklungsdienst GmbH, Ritzenhoff AG and Vogel IT-Medien GmbH.

About TC TrustCenter

TC TrustCenter is one of the world's leading providers of solutions for lifecycle management of digital certificates based on public key infrastructures. Its unique on-demand digital identity solutions are cost-effective and offer maximum security and the fastest possible implementation. TC TrustCenter's team of experienced PKI specialists and broad network of integration partners advise customers on the design and implementation of complex solutions.

TC TrustCenter services are used to protect against data manipulation, for secure access to confidential corporate and customer data, for legally admissible business communications and to protect online transactions. As an accredited certification body under the German Digital Signatures Act, Identrust, SAFE and SISAC, TC TrustCenter issues digital certificates that comply with national and international guidelines such as the European Electronic Signatures Directive.

For more than 10 years, TC TrustCenter has created worldwide trust in digital communications between employees, customers, partners and suppliers for a variety of well-known international customers, particularly in the motor industry, the financial industry and telecommunications.
