

TC TrustCenter launches premium SSL certificates

A premium product line combining high-quality SSL certificates with helpful tools and expert customer service

Hamburg, Germany – 26th April 2010 – TC TrustCenter, a leading provider of solutions for authentication, verification and encryption, has today announced that its premium product line of secure socket layer (SSL) certificates, TC Trust SSL, is now ready for distribution into the English speaking European markets. The new product line addresses common pain points associated with SSL implementations, reducing the complexity of installing and updating SSL certificates and minimising the time commitment required by the customer. Additionally, round-the-clock access to dedicated TC Trustcenter customer service adds extra value to businesses adopting the new premium SSL solutions.

The [TC Trust SSL certificate](#) product line is a specifically designed cost-efficient solution which improves flexibility and offers organisation vetting, meeting the standard security requirements of internal and external servers. Whereas the everyday management of SSL certification has traditionally been a complex task for IT staff, TC Trust SSL now enables businesses to obtain and manage certificates quicker and more efficiently than before and without any additional cost.

The new product line contains three key components; TC Trust SSL, TC Trust SSL Wildcard and TC Extended Trust SSL, which are offered as Organisation Validated (OV) certificates or Extended Validation (EV) certificates, providing additional clarification that a site is secure via a green browser bar. Each certificate is issued under a 2048-bit root CA and satisfies the current NIST¹ recommendations. TC TrustCenter has also announced the [TC ID Store](#) management tool, which is an administration interface offering increased visibility, accelerated registration and improved reporting capabilities.

"Customers often find the process of buying and implementing SSL certificates very laborious and expensive. In order to address this, TC TrustCenter understands the needs of its customers and works closely with them on all aspects of the implementation process. This ensures that the installation and administration of the certificates runs as smoothly as possible throughout the product lifecycle," said Dr. Artur Heil, Director Sales EMEA at TC TrustCenter. "By providing customised and flexible solutions, we can specifically tailor our services to address the individual needs of our customers."

Through consistent use of premium SSL certificates alongside the [Secure Site Seal](#) businesses can provide their customers with an additional, recognisable symbol of the company's commitment to ensuring transactional security. This allows customers to be confident that the site is adequately secure which can lead to improved on-line transactions and communications.

For more details of how to use and obtain the new range of SSL products from TC TrustCenter, visit: <http://www.ssl.trustcenter.de/en>

TC TrustCenter will demonstrate the TC Trust SSL solution at PGP booth (J30) at Infosecurity Europe 2010, the No. 1 security industry event in Europe held on 27th – 29th April in Earl's Court, London.

About TC TrustCenter

TC TrustCenter is one of the world's leading providers of solutions for lifecycle management of digital certificates based on public key infrastructures. Its unique on-demand digital identity solutions are cost-effective and offer maximum security and the fastest possible implementation. TC TrustCenter's team of experienced PKI specialists and broad network of integration partners advise customers on the design and implementation of complex solutions.

TC TrustCenter services are used to protect against data manipulation, for secure access to confidential corporate and customer data, for legally admissible business communications and to protect online transactions. As an accredited certification body under the German Digital Signatures Act, Identrust, SAFE and SISAC, TC TrustCenter issues digital certificates that comply with national and international guidelines such as the European Electronic Signatures Directive.

For more than 10 years, TC TrustCenter has created worldwide trust in digital communications between employees, customers, partners and suppliers for a variety of well-known international customers, particularly in the motor industry, the financial industry and telecommunications.
